library was constructed in the Express 1 plasmid vector by Open Biosystems. First strand cDNA synthesis was primed with an 54 bp! linker primer contraining an oligodT sequence preceded by a synthetic NoL1 site (first strand primer: 5 '-CACTAGTTCTAGATGGCGAGCGGCCC(T(7)25-3'). Following second strand synthesis, cDNAs were made blunt at the end corresponding to the original 5 prime end of mRNA, and cloned directionally into the NoL1 and ECORV sites of Express 1. Note that the ECORV site is typically destroyed in the blunt end cloning, leaving a junction of the form 'xxxATC' (where is ATC is the second half of the ECORV site, and xxx is desired from the CDNA sequence). A map of the Express 1 vector is available at:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Fax: 7654963621

HindliI (presumptive cloning site) found. Basecalling by phred

Hindli (presumptive cloning sequence was derived from the raw sequence read by clipping with lucy version 1.19s. Bases 24-707 of the raw sequence (length 1006) were retained after clipping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OMBAU147H24.f OA BBA Oryza alta genomic clone OA_BBA0147H24 5', genomic survey sequence.

Naming Conventions: EST name is generated by the concatenation of
the UGI Clone Ill.gov
Indicates a reverse sequencing read of the insert. It does not
indicates a reverse sequencing read of the insert.
It does not
necessarily reflect the orientation of the insert.
Poly-A: Based upon the presence of a run of 14 or more T residues
at the beginning of the sequence, this clone was polyadenylated.
The resulting Poly-T sequence has been removed.
Small insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.
Plate: XZT 0445 row: p column: 13

Coli strain XL10-Gold, T1-resistant, P-"
/clone_lib="Mouse 10kb plasmid UUGCIM library"
/note=="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/GJ (male) was obtained from the Jackson
Laboratory Mouse DNA Resources (documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch onfitica at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis vector DNA was prepared from a derivative
of pWD42 (gi|4732114|gb|AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

for Uppsala University by Marie-Christine Le Paalier in
the laboratory of Denis Le Paslier at the Centre d'Etude
du Polymorphisme Humain (CEPH), Paris, France Briefly,
Trypanosoma cruzi CL-Brener agarose embedded DNA (obtained
from Dr. Pranco da Silveira) was partially digested with
Hin dIII. High molecular weight fragments were ligated in
pBeloBAC11 digested with Hin dIII. The average insert
size is 100 kb. Total clone coverage: approx. 33 X the
haploid genome."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               /note="Site 1: Sall; Site 2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5] GAGAGAGAGACTCTTTTTTTTTTTTTTTV 3], CDNA was prepared by using trehalose thermo-activated reverse transcriptes and subsequently enriched for full-length by cap-trapper. CDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 10.0.0 Second strand cDNA was cloned into the XhoI and BamHI sites. 3], cDNA was cloned into the XhoI and BamHI sites. Vector: a modified Bluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: Sall; 3' end:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

Sequence 84, Application US/09451527

Sequence 84, Application US/09451527

Patent No. 6482403

GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

APPLICANT: Pang, Shumin

APPLICANT: Pang, Shumin

APPLICANT: Wonderling, Ramanis.

TITLE OF INVENTION: CANINE AND FELINE IMMUNOREGULATORY PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES, AND USES THEREOF

FILE REFERENCE: 1999-12-01

CURRENT FILING DATE: 1999-12-01

SARLIER APPLICATION NUMBER: 09/322,409

SARLIER PPLICATION NUMBER: 60/087,306

EARLIER PLILNG DATE: 1998-05-29
                                                                                                                                       GENERAL INFORMATION:

APPLICANT: Sim, Gek-Kee

Sequence 45191, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OP INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OP INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
FILE REFERENCE: CLOOR.307

CURRENT APPLICATION NUMBER: US/09/949, 016

CURRENT FILING DATE: 2000-04-14

PRIOR PRILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237, 768

PRIOR PILING DATE: 2000-10-03

SEQ ID NOS: 207012

SOFTHARE: PRESENCE PRESENCE OF WINDOWS VERSION 4.0

SEQ ID NO 45191

LENGTH: 601
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APPLICANT: Yuqiu, Jiang
